## About Bold Communications

Bold Communications is a UK software and projects company which has operated in the security monitoring sector for over 30 years and supplies Gemini, an integrated platform for monitoring intruder, fire, CCTV, lone worker, access control, telecare and other security applications. Bold Gemini is used by alarm receiving centers providing commercial monitoring services as well as government, police, banks, utilities, universities, NHS, retail, fire and rescue.

## Bold Gemini

The Bold Gemini monitoring platform supports a range of CCTV devices and systems, as well as intruder and fire alarm panels, access control and lone worker protection.

With all the alarm handling information presented in a single user interface, the operator can easily access and process the configured response tasks. Supported by our team of

24/7 technical specialists, Gemini also supports high level integration to optimize the information and responses available for effective alarm and event handling.

## Interoperability

### Supported Bold Models

- Bold Gemini v2.0

### Supported Bold Models

- IP Cameras
- PTZ Cameras
- Network Recorders
- HDCVI Recorders

## Features

View live video and pre-alarm clips

Direct camera import for time saving

View single cameras or groups

Multi-view screens for

PTZ screen control

Interactive site plans

Give audio warnings to site and listen in

Reference image support

Apply global, custom, manual or automated handling tasks

Alarm event can be received from any trigger or system

CCTV alarm handling tasks can be configured as a workflow

Supervised connection

Integrate conventional alarm panels with live and alarm video

BS5979, BS8418 and EN50518 reporting compliance

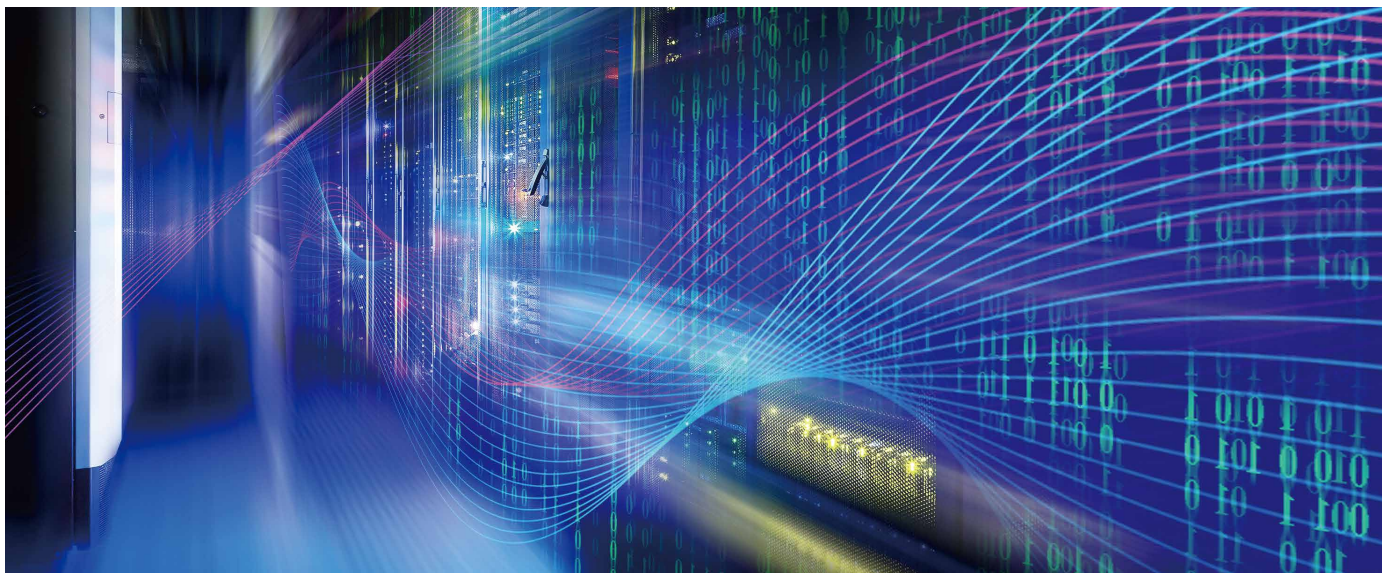

False alarm management features

## User Benefits

Space and resources are always at a premium in a control room where fire and intruder, CCTV, audio, telecare, access control, asset tracking and remote site management may all be handled together. Different client and web applications for each monitoring service can quickly become a constraint, with staff needing to be proficient in different systems with diverse operating methods and standalone databases.

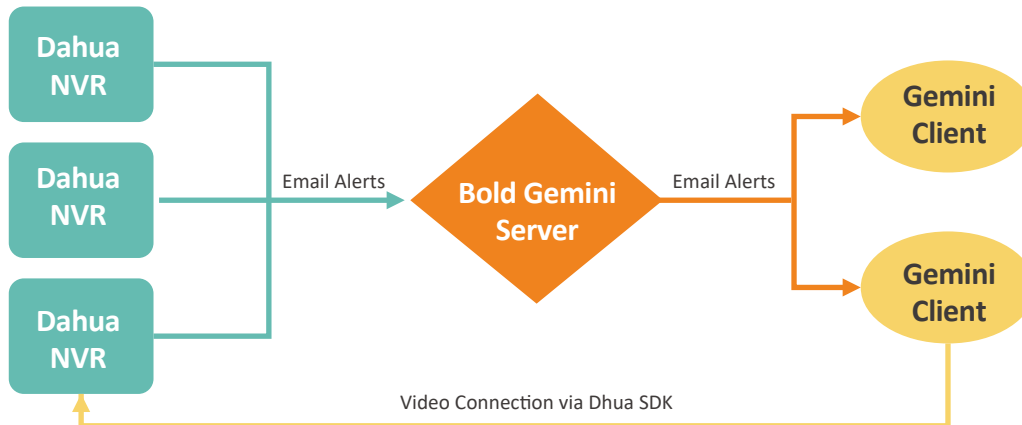

Monitoring Dahua CCTV in the Bold platform provides full access to Gemini functionality. As all standard alarm types can be handled at the workstation with false, nuisance and duplicate alarm activations filtered out or quickly closed with a single click, efficiency in the control room can be optimized.

This reduces the need for operator resources as well as achieving efficiencies for energy, space, training and support, as well as reducing equipment costs, single points of failure and the carbon footprint.

## How it works

Gemini can receive alarm events from Dahua systems via either e-mail or TCP. E-mail is the most popular method currently. When Gemini receives the event it is initially displayed in the alarm queue with an audio alert. As soon as the alarm is selected, Gemini automatically connects to the Dahua system at the monitored site, opening a live video feed and, based on the event time, pre-alarm video. Both live and pre-alarm views are presented within the alarm handling screen. The pre-alarm video period can be configured in Gemini, with a default of 5 seconds. The system presents the operator with a workflow of tasks and features, described as above, to verify and handle the alarm event.

## Smarter Together

- ARC compliant monitoring software
- Single platform efficiency
- Combining the features and benefits of the Dahua CCTV solution
